

Classy Music: Genre Classification using Text Mining

Michael Sörsäter
IDA Linköping

Abstract

Your Abstract Text Goes Here. Just a few facts. Whet our appetites.

1 Introduction

Introduce the problem that you have addressed in your project. What did you do? Why did you do it?

2 Teory

Present relevant theoretical background, and in particular the models that you have used.

3 Data

Present your data. How does it look like? Where did you get it from? What pre-processing have you done, if any?

4 Method

Explain how you carried out your project. Your presentation should allow others to reproduce your results

5 Results

Present your results in an objective way. Use tables and charts, but do not forget to summarise in text form.

6 Discussion

What do you make of it? Discuss your results and present your analysis in terms of the background theory. [1]

7 Conclusion

In what sense has your project reached its goal? What did you learn from your project? [2]

References

Present a complete list of references. Choose a bibliographic style and stick to it. dddddd
